

Important Update: Demand Mapping of Lignite Customers

Dear Valued Customers,

In response to the evolving global energy landscape and the rising demand for solid fuel, Gujarat Mineral Development Corporation (GMDC) is committed to enhancing our service and operational efficiency.

We understand that supply inconsistencies due to various challenges can disrupt your operations and impact overall performance. To ensure a stable, consistent, and high-quality supply of Lignite, we intend to launch a Demand Mapping Initiative. This exercise will provide us with the visibility needed to optimize resource allocation and better serve our genuine industrial users.

Starting the first week of May 2026, GMDC executives will reach out to collect tentative grade-wise demand data for the upcoming three-month period (**May, June, and July**).

The mapping will cover the following operating mines:

Sr	Mines	Grade	Grade Description
1	Bhavnagar	BA	Bhavnagar Lignite
2	Bhavnagar	BB	Beneficiated Lignite
3	Mata No Madh	MA	Mata No Madh Lignite
4	Umarsar	UA	Umarsar Lignite
5	Tadkeshwar	TA	Tadkeshwar Lignite

Following data collection and analysis, GMDC will implement a dynamic allocation plan based on actual demand and historical booking performance. We kindly request that you provide your specific requirements to our representatives when contacted.

Our goal is to fulfil your fuel needs economically and reliably. Thank you for your continued partnership and for helping us fuel the growth of the industry.

Thanking You,

Marketing & Sales Department GMDC Ltd
